MODERN RISK SERVICES

Projekt47 Presents

# UNMANNED AERIAL VEHICLES...

Unmanned Aerial Vehicles (UAV's) offer unrivalled capability to provide aerial photogrammetry to support a large range of security, surveying and imaging tasks. UAV's provide capabilities not available to ground based operations. The use of UAV's can add tempo and assist existing operations. Crucially, they can also limit or reduce the need for personnel exposure in high risk / high threat environments.

- **Projekt 47** is an independent UK-based company specialising in the provision of tailored, bespoke UAV capabilities to deliver maximum benefit to clients.
- **Projekt 47** work collaboratively with clients to understand their need and then fully define and provide bespoke capabilities with the right equipment, people, training and through-life contract support to meet the client requirements.
- **Projekt 47** supports any scale of operation drawing upon a pool of highly experienced operators using a range of fixed and rotary wing UAVs, fully supported by all the logistic capabilities to deploy and sustain UAV operations globally.
